

## **Vuntut Gwitchin Government and Gwich'in Tribal Council Respond to the Record of Decision for the Coastal Plain Oil and Gas Leasing Program Arctic National Wildlife Refuge**

**(Old Crow, Yukon, Canada – August 18, 2020)**

On August 17<sup>th</sup> 2020, the U.S. Bureau of Land Management (BLM) published the Record of Decision (ROD) for the Coastal Plain Oil and Gas Leasing Program. This is the final step of the environmental review process which is required to be completed before implementing the oil and gas lease sales in the Coastal Plain of the Arctic National Wildlife Refuge mandated in the 2017 Tax Cuts and Jobs Act passed by the Trump Administration.

The Record of Decision identifies that the BLM will be proceeding with Alternative B which is the most destructive drilling alternative identified and offers the opportunity to lease the entire Coastal Plain of the Arctic National Wildlife Refuge.

This decision is a result of a rushed and inadequate environmental review process. The aggressive timeline followed by BLM to complete this process resulted in an inability to compile adequate baseline information or to undertake the full impact analysis necessary to determine potential implications for the Porcupine caribou herd, climate change, our sacred lands, and our inherent rights.

Throughout the process, the BLM failed to adequately acknowledge, consult, or provide reasonable opportunities for participation by Vuntut Gwitchin First Nation and Gwich'in Tribal Council. Despite this purposeful exclusion, our governments and our citizens have worked tirelessly to participate as best we could and to voice our concerns about the impacts of oil and gas development in "Izhik Gwats'an Gwandaii Goodlit" (The Sacred Place Where Life Begins). BLM has continuously disregarded these concerns.

Vuntut Gwitchin Government and Gwich'in Tribal Council feel confident that the work we have done to ensure our concerns on our record will play an important role in demonstrating the failure of BLM in undertaking a robust and inclusive environmental review process.

*What happens next?*

Now that the Environmental Impact Statement process is complete, the BLM can begin working through the lease sale process by releasing a Call for Nominations. The Call for Nominations is the process to identify areas to be offered in the first lease sale. It expect that it will include a public comment period which can be used as an opportunity to identify specific areas that should not be offered because of their value, use, and importance. There has been no indication when this process will begin.

Vuntut Gwitchin Government and Gwich'in Tribal Council will be calling upon our partners, allies, and friends to stand with us, the entire Gwich'in Nation and the Porcupine caribou herd to use the Call for Nominations as another opportunity to tell the BLM that drilling in the Coastal Plain of the Arctic National Wildlife Refuge is not sustainable and threatens the human rights of the Gwich'in.

Following a Call for Nominations, we expect BLM to release a Detailed Statement of Sale before holding a lease sale, which could occur as early as this fall.

## Quotes

“In identifying Alternative B as the preferred leasing scenario, which offers the most land for leasing with the fewest restrictions and protections, BLM completely disregards the critical importance of “Iizhik Gwats’an Gwandaii Goodlit” to the Gwich’in Nations inherent and human rights. No amount of money can ever justify what is taking place here and anyone who says different is merely using their office or systems to craft complex excuses on a simple matter. It is time the world took notice that this is a human rights crisis.” **Chief Dana Tizya-Tramm, Vuntut Gwitchin First Nation**

“It is extremely disheartening to think a lease sale could occur this year based on the findings of BLM’s rushed and inadequate environmental review process that failed to identify these lands as the life blood of the Gwich’in Nation. The Gwich’in will continue to stand united with all of our allies to do whatever we can to delay a lease sale from occurring and we will not stop in this work until the Coastal Plain of the Arctic National Wildlife Refuge is permanently protected from oil and gas exploration and development. In 1988 the Gwich’in were directed by the Elders to work in a good way until this sacred place is protected and we will listen to our Elders and not give up.” **Grand Chief Bobbie Jo Greenland- Morgan, Gwich’in Tribal Council**

RE: Final Environmental Impact Statement for the Coastal Plain Oil and Gas Leasing Program

Dear Ms. Hayes,

Vuntut Gwitchin Government is deeply concerned with the Final Environmental Impact Statement (Final EIS) for the Coastal Plain Oil and Gas Leasing Program.

In our review of the Final EIS thus far, Vuntut Gwitchin Government does not feel that the Bureau of Land Management (BLM) has adequately or meaningfully addressed the concerns we raised in our letter dated March 14, 2019 on the Draft EIS.

Throughout the Environmental Impact Statement process for the Coastal Plain Oil and Gas Leasing Program, BLM has failed to adequately acknowledge, consult or provide reasonable opportunities for Vuntut Gwitchin First Nation participation; failed to adequately assess cumulative and transboundary impacts to Vuntut Gwitchin First Nation; failed to utilize the Traditional Knowledge of the Vuntut Gwich'in, based on thousands of years of co-existence with the Porcupine caribou; and failed to assess the impacts of oil and gas activity on the Vuntut Gwitchin First Nation subsistence harvest of the Porcupine caribou herd. Vuntut Gwitchin Government presented these deficiencies in the process to date in our letter on the Draft EIS and they have yet to be rectified.

Of the proposed oil and gas leasing programs outlined in the Final EIS, Vuntut Gwitchin First Nation only support Alternative A, No Action. In identifying Alternative B as the preferred leasing scenario, which offers the most land for leasing with the fewest restrictions and protections, BLM completely disregards the critical importance of "Iizhik Gwats'a n Gwandaii Goodlit" to Vuntut Gwitchin First Nation's physical, cultural and spiritual survival.

Phone: (867)966-3261  
Fax: (867)966-3116  
Web: [www.vgfn.ca](http://www.vgfn.ca)

At no point did BLM initiate consultation with Vuntut Gwitchin First Nation to acknowledge the thousands of years of Traditional Knowledge we hold or to acknowledge our interests and concerns as a potentially affected subsistence community.

In responses to several of the comments we submitted on the Draft EIS, BLM states the Final EIS has “been revised to more fully analyze transboundary impacts, where applicable” and that “text has been added specifically addressing Canadian sociocultural systems and potential impacts to those systems”. These are substantive changes that should have been addressed in a revised or supplemental EIS to the draft EIS and reissued for public review per our letter dated October 1, 2019. We note that the changes are insufficient to address the issues raised.

Vuntut Gwitchin Government remains concerned that this process lacked the time and resources necessary to be robust and transparent. The aggressive timeline this process followed resulted in an inability to compile adequate baseline information and to undertake the full impact analysis necessary to determine the potential impacts to the Vuntut Gwitchin First Nation, and the Porcupine caribou herd.

Vuntut Gwitchin Government would like to acknowledge that this letter is not indicative of the total extent of our comments and concerns on the Final EIS for the Coastal Plain Oil and Gas Leasing Program but is our formal request that BLM correct the deficiencies of the process to date and acknowledge and engage with the Vuntut Gwitchin First Nation and other potentially impacted Canadian subsistence communities.

RE: Transboundary Impacts Analysis in the Final Environmental Impact Statement for the Coastal Plain Oil and Gas Leasing Program

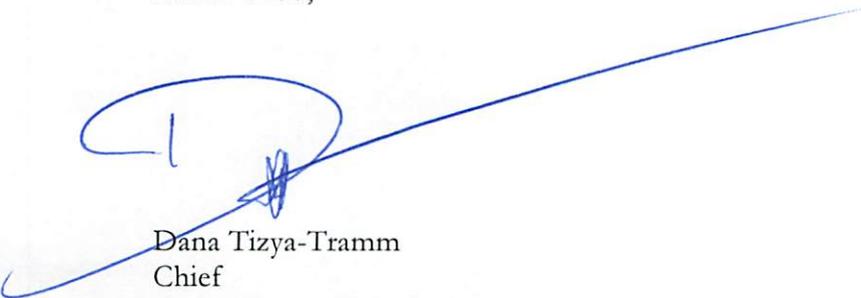

Dear Ms. Hayes,

It has come to Vuntut Gwitchin Government's attention that new analysis on transboundary impacts have been added to the analysis of environmental impacts for each resource within Chapter 3 Affected Environment and Environmental Consequences of the Final Environmental Impact Statement "Final EIS" for the Coastal Plain Oil and Gas Leasing Program.

This is a substantive change that should have been addressed in a revised or supplemental EIS to the draft EIS and reissued for public review. Vuntut Gwitchin Government formally requests the Bureau of Land Management host a public comment period, and that public meetings are held in the Vuntut Gwitchin First Nation community of Old Crow, Yukon, and other Canadian communities to discuss these substantive changes.

Vuntut Gwitchin Government would like to acknowledge that this letter is not indicative of the total extent of our comments and concerns on the Final EIS for the Coastal Plain Oil and Gas Leasing Program but is solely to serve as our formal request that the Bureau of Land Management move forward with an inclusive and transparent regulatory process.

Mahsi' choo,

Dana Tizya-Tramm

**RE: *Notice of Availability of the Draft Environmental Impact Statement for the Coastal Plain Oil and Gas Leasing Program***

Dear Ms. Hayes:

The Vuntut Gwitchin Government is deeply concerned with the Draft Environmental Impact Statement "draft EIS" for the Coastal Plain Oil and Gas Leasing Program within the "1002 lands" of the Arctic National Wildlife Refuge.

In its assessment of future oil and gas activities on the Coastal Plain, the Bureau of Land Management failed to adequately acknowledge, consult or provide reasonable opportunities for Vuntut Gwitchin First Nation participation in the Scoping and draft EIS processes; failed to assess cumulative and transboundary impacts to the Vuntut Gwitchin First Nation; failed to utilize the Traditional Knowledge of the Vuntut Gwich'in, based on thousands of years of co-existence with the Porcupine caribou; and failed to assess the impacts of oil and gas activity on the Vuntut Gwitchin First Nation subsistence harvest of the Porcupine caribou herd.

In this submission, we set forth rationale for these statements, and request that: (1) the Bureau of Land Management correct deficiencies of the draft EIS by producing a supplemental draft EIS with full consideration of cumulative and transboundary impacts, and the expert Traditional Knowledge of the Vuntut Gwich'in; and (2) acknowledge and engage the Vuntut Gwitchin First Nation and other Canadian users groups of the Porcupine caribou herd as potentially affected subsistence communities under ANILCA Sec. 810.

Mahsi' choo,

A handwritten signature in black ink, appearing to be "Dana Tizya Tramm", with a long horizontal line extending to the right.

Chief Dana Tizya Tramm

March 13, 2019

## Introduction

*Vadzhaai*, the caribou, are the heart of Vuntut Gwich'in<sup>1</sup> culture and subsistence economy. The Porcupine caribou migrate north each spring through the Vuntut Gwitchin First Nation Traditional Territory to critical calving and nursery grounds in Alaska, where most calves are born. In the fall, the Porcupine caribou return to our homeland, fattened and healthy. For tens of thousands of years the Porcupine caribou herd has occupied the Traditional Territory of the Vuntut Gwitchin First Nation, providing sustenance to our people.

The Vuntut Gwich'in fear the proposed oil and gas leasing program in the Coastal Plain will result in environmental pollution, contamination and habitat disturbance that will degrade and permanently alter the intricate wholeness and habitat integrity of the calving and post-calving grounds, migratory movements and long-term stability of the Porcupine caribou herd. A threat to the health of the Porcupine caribou herd is a threat to Vuntut Gwich'in physical, cultural and spiritual survival.

We are concerned the aggressive timeline of United States Department of the Interior/Bureau of Land Management to complete the Coastal Plain Oil and Gas Leasing Program Environmental Impact Statement in 2019 means there will not be adequate time or resources for the robust, transparent regulatory process that is required to compile adequate baseline environmental information, or undertake the full impact analysis necessary to determine the potential impacts of oil and gas activity on the Coastal Plain to the Vuntut Gwitchin First Nation, and the Porcupine caribou herd.

The calving grounds of the Porcupine caribou are so important to the Gwich'in Nation we call it *The Sacred Place Where Life Begins*. In 1988, Gwich'in Elders delivered a clear mandate to permanently protect the sacred calving grounds (and to do it in a good way).<sup>2</sup> Gwich'in youth reasserted this mandate through the *Ni'inlii Declaration* at the 14<sup>th</sup> bi-annual Gwich'in Gathering, "The Gwich'in stand in solidarity and support of permanent protection of the Porcupine Caribou calving and post calving grounds and their migratory routes."<sup>3</sup> For over 30 years, the Gwich'in on both sides of the Canada/US boarder have called for permanent protection for the refuge Coastal Plain "1002 lands," in effort to protect the Porcupine caribou herd, and provide cultural sustenance and food security for our people for generations to come.

*It's not about us. It's never about us. It's about our grandchildren, seven generations from now.*

*Lorraine Netro, Vuntut Gwitchin First Nation*

---

<sup>1</sup> When referring to the Final Agreement or Government, "Gwitchin" is used. When referring to the people, the culture, the nation etc. the correct spelling of "Gwich'in" is used.

<sup>2</sup> Gwich'in Niintsyaa, 2016. Resolution to Protect the Birthplace and Nursery Ground of the Porcupine Caribou Herd.

<sup>3</sup> Ni'inlii Declaration. 2016. <https://www.vgfn.ca/pdf/ni%C2%B9inlii%20declaration%20final%2014bgg-july-2016.pdf>

Of the proposed oil and gas leasing programs outlined in the current draft EIS, the Vuntut Gwitchin First Nation only supports Alternative A, No Action, because it affords the strongest protection for the Porcupine caribou herd's essential calving, post-calving and insect relief habitats, the best likelihood of meeting the subsistence, cultural and spiritual sustenance of the Vuntut Gwich'in, and of ensuring our ancient and enduring relationship with the Porcupine caribou.

Note: it is not understandable, knowing the importance of Porcupine caribou calving and post-calving areas to the Gwich'in and other user groups, why the Bureau of Land Management developed Alternatives B and C, which consider opening the entire Coastal Plain (1.56 million acres), and Alternative D, which considers opening over 1 million acres - when the Tax Act provisions only call for at least two lease sales of 400,000 acres each.

In our review of the draft EIS, we observed the Bureau of Land Management did not address many issues raised by the Vuntut Gwitchin First Nation, in public hearings testimony and in our Comment Letter during the scoping period, pertaining to our relationship with the Porcupine caribou herd and our wealth of Traditional Knowledge. As a result of these significant information and consultation gaps, failure to provide a reasonable range of alternatives, and to conduct a meaningful impact analysis, inclusion of the Vuntut Gwitchin First Nation in the review process was impaired.

We conclude the draft EIS is so deficient, and its approach to the impacts analysis is so deeply flawed, the Bureau of Land Management must revise and reissue the draft EIS for public review if it is to move forward with an inclusive and transparent regulatory process.

Therefore:

- The Vuntut Gwitchin Government formally requests the Bureau of Land Management re-open the public comment period on the draft EIS, and that public meetings are held in the Vuntut Gwitchin First Nation community of Old Crow, Yukon, and other Canadian communities to discuss the Coastal Plain oil and gas leasing program draft EIS.
- The Vuntut Gwitchin Government formally requests that Bureau of Land Management hold a public subsistence hearing per ANILCA Section 810 in Old Crow, Yukon, and meets consultation requirements with the Vuntut Gwitchin First Nation.
- The Vuntut Gwitchin Government formally requests an extension of 60 days to comment on the draft EIS, to provide time for meetings and hearings to occur in Old Crow and Canada, and provide any additional comments the Vuntut Gwitchin First Nation may further identify as a result; and finally,
- On release of a revised EIS, the Vuntut Gwitchin Government formally requests public meetings and hearings in Old Crow, Yukon and other Canadians communities.

## Failure to Adequately Consult the Vuntut Gwitchin First Nation

The Bureau of Land Management did not provide reasonable opportunity for Vuntut Gwitchin First Nation participation at public meetings during the scoping and draft EIS stages - despite requests of the Vuntut Gwitchin First Nation and other Canadian agencies to hold hearings in Canada. As a result, Vuntut Gwitchin First Nation interests and concerns as a primary user group of the Porcupine caribou herd were not adequately represented due to the expensive and extensive travel required to reach meeting locations in Alaska and Washington DC, and Vuntut Gwich'in were not able to speak directly about the proposed developments in our traditional manner of oral story telling.

*My name is Dana Tizya-Tramm of the Vuntut Gwitchin Government. I had to travel from my home in the Yukon, down to Seattle [and] up here [to Anchorage] today to speak...*

*It is the future of my people that I must now squeeze into five minutes.*

*I would like to make a formal request that not only this scoping period be extended, but [that] it also encompass the thousands of people who cannot sleep at night, the young children in my community at six years old that come up to me and ask me why this is happening and if we can talk to Donald Trump. The kids in the Gwich'in communities, the children use crayons to draw pictures of their caribou camps. This is their childhoods. This is our future. The caribou carry all of our knowledge and our teachings....*

Dana Tizya-Tramm, Vuntut Gwitchin First Nation  
Scoping Hearing, Anchorage

Chief Zzeh Gittlit School  
Old Crow, Yukon

The Bureau of Land Management did not address the significant concerns raised by the Vuntut Gwitchin First Nation at public hearings and in written comments during the scoping period. The Scoping Report contained no reference to the “Vuntut Gwitchin First Nation”, the “Vuntut Gwitchin Government” or “Old Crow, Yukon”. The Gwich’in are the largest subsistence user group of the Porcupine caribou herd, but the word “Gwich’in” was used only 10 times in the entire Scoping Report.<sup>4</sup>

While the scoping report included the following in its general synopsis of comment, the draft EIS failed to take these and other requested actions:

On public outreach:

*Many Commenters requested meetings in additional Alaskan and Canadian towns, including Fort Yukon, Beaver, Circle, Fort McPherson, Aklavik, Beaver, Birch Creek, and Chalkyitsik. (p. 3-2). (Note omission of request from the Vuntut Gwitchin Government for a public meeting in Old Crow.)*

On government-to-government consultation:

*Commenters would like the BLM to extend consultation invitations to Canadian communities that depend on the Porcupine caribou herd. (p. 3-2).*

On the Agreement between the Government of Canada and the Government of the United States on the Conservation of the Porcupine Caribou Herd (1987):

*...Commenters ask that the BLM further consider Canadian interests in deliberations and management actions. Commenters emphasized that the EIS must address trans-boundary impacts of development on the Coastal Plain and how management actions may affect the conservation of the Porcupine caribou herd, US/Canada relations, and the Alaskan, Canadian, Gwich'in, and Iñupiat people. (p. 3-5, 3-6).*

On the Porcupine Caribou herd:

*Requested that the BLM seek input from Canadian scientists, governments, and Indigenous knowledge holders on the potential effects of oil and gas activities on caribou and the transboundary impacts of the proposed activities. (p. 3-10, 3-11).*

The Bureau of Land Management did not initiate consultation with the Vuntut Gwitchin First Nation or the Vuntut Gwitchin Government, nor with any other Canadian First Nation or government (draft EIS Vol I p. 1-4; Vol II p. C-1 to C-3).

Information about Old Crow and the significant relationship of the Vuntut Gwich’in with the Porcupine caribou herd, submitted by the Vuntut Gwitchin Government during scoping phase, was disregarded, and the Bureau of Land Management failed to provide an adequate environmental and social baseline for our community and First Nation upon which to analyze impacts.

---

<sup>4</sup> [https://eplanning.blm.gov/epl-front-office/projects/nepa/102555/152084/186300/Coastal\\_Plain\\_Leasing\\_EIS\\_Final\\_Scoping\\_Report\\_508.pdf](https://eplanning.blm.gov/epl-front-office/projects/nepa/102555/152084/186300/Coastal_Plain_Leasing_EIS_Final_Scoping_Report_508.pdf).

This is exemplified by:

- The word “Vuntut” Gwich’in is mentioned in only four instances in the draft EIS Vol 1 (only in Subsistence Uses and Resources) and only two instances in Vol 2 (Table M-21PCH harvest data and the reference to this Table (PCMB 2010 Harvest Management Plan for the PCH in Canada).
- The word “Old Crow” community is mentioned in only eight instances (of these, two were additional references to those with Vuntut Gwich’in).
- Only 1 map depicts Old Crow, “Subsistence Study Communities” (Map 3-27). While Old Crow is denoted as a “Caribou study community” the draft EIS contains no corresponding “Caribou study.” The map contains major errors, for example, the depiction of the ranges of the Central Arctic and Porcupine caribou herds. The map does not clearly differentiate the 15 Gwich’in communities, nor does it distinguish the communities’ reliance by herd, nor describe such baseline conditions in the draft EIS text.
- While the subsistence section mentions “approximately 85% of the Porcupine Caribou herd harvest occurs in Canada,” and “the NWT Gwich’in people, Vuntut Gwich’in people, and Inuvialuit are the primary Canadian users in terms of number harvested,” (draft EIS p. 3-169), the draft EIS fails to address how oil and gas exploration and development may impact the energetics and resiliency of the Porcupine caribou herd and its availability to the Vuntut Gwich’in over the next 85-130 years, such as impacts to the size of the herd, migration routes, climate change etc.
- While the draft EIS mentions Old Crow is “among the most likely to experience potential indirect impacts due to their proximity and reliance on the PCH,” (draft EIS p. 3-170), the Bureau of Land Management provides no specific information about our community, the Vuntut Gwich’in special relationship with the Porcupine caribou herd, and no Traditional Knowledge is included in the draft EIS – a problem that was exacerbated by the lack of public meetings in Old Crow, Yukon or direct consultation with the Vuntut Gwich’in First Nation.

Lastly, the format and delivery of the draft EIS presents a further barrier to effective inclusion of the Vuntut Gwich’in First Nation in the EIS process. A plain language summary, by which the proposed actions and alternatives can be readily understood by Elders, Vuntut Gwich’in First Nation citizens and the public, was not made available. The maps included in the draft EIS are misrepresentative because they do not include the entire range of the Porcupine caribou herd, the Arctic Refuge and other protected areas, or Old Crow and other Gwich’in communities. The Bureau of Land Management did not provide Gwich’in translation for any of the BLM scoping or draft EIS documents.

## Requirements for Consultation

### United Nations Declaration on the Rights of Indigenous Peoples

The *United Nations Declaration on the Rights of Indigenous Peoples*, endorsed by both the United States and Canada, is a universal human rights instrument that recognizes Indigenous Peoples', "culture, spiritual traditions, histories and philosophies, especially their rights to their lands, territories and resources".

*Indigenous peoples have the right to maintain and strengthen their distinctive spiritual relationship with their traditionally owned or otherwise occupied and used lands, territories, waters and coastal seas and other resources and to uphold their responsibilities to future generations in this regard. (Article 25)*

*Indigenous peoples have the right to the conservation and protection of the environment and the productive capacity of their lands or territories and resources. (Article 29(1))*

*States shall consult and cooperate in good faith with the indigenous peoples concerned through their own representative institutions in order to obtain their free and informed consent prior to the approval of any project affecting their lands or territories and other resources, particularly in connection with the development, utilization or exploitation of mineral, water or other resources.*

*States shall provide effective mechanisms for just and fair redress for any such activities, and appropriate measures shall be taken to mitigate adverse environmental, economic, social, cultural or spiritual impact. (Article 32)*

The United Nations Declaration on the Rights of Indigenous Peoples<sup>5</sup>

*Free, Prior and Informed Consent is relevant ... in relation to development projects encompassing the full project cycle, including but not limited to assessment, planning, implementation, monitoring, evaluation and closure.*

UN Permanent Forum on Indigenous Issues<sup>6</sup>

### International Covenant on Civil and Political Rights

International Human Rights law supports consideration in the EIS of the effects of any oil and gas exploration and development in the Refuge Coastal Plain that may impair subsistence harvests of Gwich'in communities on both sides of the international boundary. Canada and the United States are both party to the International Covenant on Civil and Political Rights.

---

<sup>5</sup> UN General Assembly, United Nations Declaration on the Rights of Indigenous Peoples: resolution / adopted by the General Assembly, 2 October 2007,

<sup>6</sup> UN Permanent Forum on Indigenous Issues, Report of the International Workshop on Methodologies regarding Free, Prior and Informed Consent and Indigenous Peoples

*In no case may a people be deprived of its own means of subsistence. Article 1(2)*

*In those States in which ethnic, religious or linguistic minorities exist, persons belonging to such minorities shall not be denied the right, in community with the other members of their group, to enjoy their own culture, to profess and practice their own religion, or to use their own language. Article 27*

International Covenant on Civil and Political Rights<sup>7</sup>

### International Porcupine Caribou Agreement

Under the *Agreement Between the Government of Canada and the Government of the United States of America on the Conservation of the Porcupine Caribou Herd*,<sup>8</sup> the US and Canadian governments recognized the importance of “conserving the habitat of the Porcupine Caribou Herd, including such areas as calving, post-calving, migration, wintering and insect relief habitat,” and that “the Porcupine Caribou Herd should be conserved according to ecological principles.” They understood, “the conservation of the Porcupine Caribou Herd and its habitat requires goodwill among landowners, wildlife managers, users of the caribou and other users of the area,” and agreed, “to conserve the Porcupine Caribou Herd and its habitat through international co-operation and co-ordination so that the risk of irreversible damage or long-term adverse effects as a result of use of caribou or their habitat is minimized.” The Parties agreed that, “when evaluating the environmental consequences of a proposed activity...[to] consider and analyze potential impacts, including cumulative impacts, to the Porcupine Caribou Herd, its habitat and affected users of Porcupine Caribou.”

The Bureau of Land Management failed to transparently initiate international consultation, coordination or cooperation on the proposed Coastal Plain Oil and Gas Leasing Program in accordance with the terms of the Agreement on the Conservation of the Porcupine Caribou Herd between the US and Canada (Vol 1 draft EIS p. 1-5).

## **Failure to Recognize the Vuntut Gwitchin First Nation**

The impact assessment in the draft EIS does not acknowledge the information and issues raised by the Vuntut Gwitchin First Nation at the scoping stage concerning necessary baseline information - cultural resources, subsistence harvest and socioeconomic values, and Vuntut Gwitchin First Nation Traditional Knowledge on the Porcupine caribou herd. These topics should have been followed by substantive information and analysis in the draft EIS.

## **Vuntut Gwich'in Co-existence with the Porcupine Caribou**

The draft EIS fails to acknowledge the interwoven relationship of the Vuntut Gwich'in and the Porcupine caribou, despite the fundamental importance of this relationship to our people.

---

<sup>7</sup>The United Nations. International Covenant on Civil and Political Rights

<sup>8</sup>*Agreement Between the Government of Canada and the Government of the United States of America on the Conservation of the Porcupine Caribou Herd*. 1987. <https://www.treaty-accord.gc.ca/text-texte.aspx?id=100687>

*The caribou are very spiritual to us as a nation: it reminds us of where we came from and our ancestral ties to the land in Vuntut Gwitchin territory.*<sup>9</sup>

Roger Kyikavichik, Vuntut Gwitchin First Nation

*The Porcupine caribou mean everything and anything to me. It is the very essence of our culture and existence. To me, personally, the Porcupine caribou will be a part of my life as long as I am on this Earth.*<sup>11</sup>

Lance Nagwan, Vuntut Gwitchin First Nation

According to scientists, caribou have lived continually on our lands for over 400,000 years, and archeological evidence suggests Indigenous People have been in relationships with caribou for 12,000 to 29,000 years.<sup>10</sup> There is no telling exactly how long our relationship with the caribou actually is, but they have clearly been integral to Vuntut Gwich'in as far back as our stories stretch, which is well beyond any written history of humankind.<sup>11</sup>

Ancient stories tell of a Gwich'in man who left a nomadic group to join the caribou, turning into one of them. Many years later he returned to his people as a man, and taught his people how to make the incredible caribou fences that provided much food for the Vuntut Gwich'in, changing the way we lived.

*...the Porcupine Caribou hold a special place in Gwich'in culture and life. It has been said that the Gwich'in and the Caribou hold a piece of each other's heart. The Creator gave the Gwich'in the Caribou to feed and sustain the people, and to keep the teachings and responsibilities of our past, current and future generations alive.*<sup>12</sup>

Shirley Frost, Vuntut Gwitchin First Nation

*In the past, animals were considered social beings who communicated with one another and could understand human behavior and language. Elders spoke of ancient times when humans and animals were closer and could talk with each other. Legends tell of people who went for a time to live among animals. This gave them great knowledge of the land. In the case of the caribou, vadzaih and humans traded places. Each learned the difficulties and rewards of the other's life. When they changed back and separated, it was agreed that people could hunt caribou. Because of this exchange, people will always know what caribou are thinking and feeling, and caribou will have the same understanding of*

*people. This explains why it is sometimes very easy and at other times very difficult to hunt caribou.*<sup>13</sup>

## **Vuntut Gwich'in Traditional Knowledge**

*Our ancestors from time immemorial have instilled in us our spiritual connection to the land and animals and what great care we must take to preserve them for future generations to come. We must follow in the imprints of our ancestors who left their marks on the land so that we could follow their trails and teachings into the future, to never forget our dependence on and existence with the caribou.*<sup>20</sup>

Mary Jane Moses, Vuntut Gwitchin First Nation

*We, as Gwich'in youth, believe that the power of our ancestors runs strong in our blood.*

Ni'inlii Declaration, Vashraii K'oo 2016

The Bureau of Land Management did not request or engage the Vuntut Gwitchin Government to better understand Vuntut Gwich'in Traditional Knowledge in its assessment of impacts. This is problematic because, Gwich'in knowledge of caribou is detailed and covers vast areas and a long time span.<sup>14</sup> Traditional Knowledge is important in evaluating the existing human and natural environment, and how the proposed oil and gas leasing, exploration and development in the Coastal Plain will impact it.

The Vuntut Gwitchin Government has worked extensively in recent years to document ancient stories and Traditional Knowledge of the Elders and harvesters. In 2017, the Vuntut Gwitchin Government Heritage Branch compiled documented Traditional Knowledge of disturbance to caribou<sup>15</sup> to better inform best management practices for oil and gas activities in the range of the Porcupine caribou herd.

*Gwich'in knowledge holders listed a variety of things that disturb caribou. One often-expressed concern was pollution to water. Gwich'in say that caribou have no choice but to swim in polluted water. They have observed caribou eating polluted food. They are concerned that pipelines will block caribou migration and development will scare them away and they will stop coming to disturbed areas. Caribou will avoid noise and disturbances, but can get used to things like buildings if they are there for a while and no people are around. They avoid noise in most cases.*<sup>19</sup>

<sup>14</sup> Vuntut Gwitchin Government Heritage Branch, compiled by Shirleen Smith. *Vadzaih: Van Tat Gwich'in Knowledge of Caribou*. March 2017.

<sup>15</sup> The report is an amalgamation of Vuntut Gwich'in knowledge of caribou, knowledge of other Gwich'in and other Indigenous peoples, and knowledge contained in 5 published reports that have a bearing on management practices for Porcupine caribou.

## Transboundary Impacts

The draft EIS states “when evaluating the environmental consequences of a proposed activity, the Parties will consider and analyze potential impacts, to the Porcupine Caribou Herd, its habitats and affected users of Porcupine Caribou,” however, the draft EIS fails to consider or analyze the potential impacts of oil and gas development on the heritage values, subsistence harvest and spiritual well-being of Vuntut Gwich’in and other Canadian user groups.

*[F]ederal agencies should use the scoping process to identify those actions that may have transboundary environmental effects and determine at that point their information needs, if any, for such analyses. Agencies should be particularly alert to actions that may affect migratory species, air quality, watersheds, and other components of the natural ecosystem that cross borders, as well as to interrelated social and economic effects.*<sup>16</sup>

Council on Environmental Quality regarding the National Environmental Policy Act

## Impacts to the Local Economy

The Vuntut Gwitchin depend upon the integrity, health and resilience of the land and shared wildlife resources of the Refuge Coastal Plain, particularly the Porcupine caribou herd. Porcupine caribou provide a significant contribution to the regional economy, which is based on traditional subsistence harvesting and wage-based activities. The Vuntut Gwitchin Traditional Territory has one of the lowest population densities in Canada (0.005 residents/km<sup>2</sup>), and one of the lowest levels of wage-based economic activity in the Yukon.<sup>17</sup> There is no replacement for the Porcupine caribou should the population fall below sustainable harvest rates.

An important part of traditional indigenous subsistence economies is sharing in reciprocal networks of exchange.<sup>18</sup> Vuntut Gwitchin traditional practices follow the belief that “caribou meat should be shared among Gwich’in and never sold. In that way, increased caribou numbers would not influence the number harvested, because people only take what they need.”<sup>19</sup> In northern, remote Indigenous communities “store-bought food” is exorbitantly priced for a number of reasons, including the high cost of shipping. In 2010, a family of four living in Old Crow paid 320% more for food than residents of Edmonton, Alberta.<sup>20</sup> Impacts of development that result in reduced subsistence harvest, cause hardship to First Nation families and citizens that reside in locations other than the harvest community.

## Threats to Vuntut Gwitchin First Nation Conservation Efforts

The draft EIS fails to address the cumulative and transboundary impacts of oil and gas activity on conservation and regional land use planning efforts undertaken by the US, Canadian, Yukon and Vuntut Gwitchin governments to safeguard intact transboundary ecosystems – in Northeast Alaska by the Arctic National Wildlife Refuge, and in the Northern Yukon through large protected areas established in the Vuntut Gwitchin Traditional Territory and the Inuvialuit Settlement Region.

*I wouldn't be sitting here talking to you now if it wasn't for Porcupine Caribou. It's our life. It is what we've live for and what all our life revolves around. We spend enormous amounts of our energy negotiating international agreements like the Porcupine Caribou Management Agreement, protecting our land so the caribou can have some place to go. We negotiated Vuntut National Park so they have some place to go, and we are creating special management areas. All these kinds of things are geared to the subsistence lifestyle and a huge part of that is the caribou. Eighty percent plus of our diet is caribou intake. It is important to our people. It is not only important for food. It is important for spiritual, cultural, emotional and physical reasons. It is our lifestyle – a lot of it rotates around the caribou...I don't think there are any English words can express how important, all consuming, the protection of this herd is.<sup>23</sup>*

Darius Kassi, Vuntut Gwitchin First Nation

### Vuntut Gwitchin First Nation Final Agreement

The *Vuntut Gwitchin First Nation Final Agreement*<sup>24</sup> recognizes the Vuntut Gwitchin First Nation assertion of, “aboriginal rights, titles and interests with respect to its Traditional Territory,” and protects, “a way of life that is based on an economic and spiritual relationship between the Vuntut Gwitchin and the land,” as well as, “the cultural distinctiveness and social well-being of Vuntut Gwitchin.” The Agreement was signed by the governments of Canada and Yukon, and the Vuntut Gwitchin First Nation on May 29, 1993, and came into effect on February 14, 1995.

Under the Agreement, the Vuntut Gwitchin First Nation owns the surface and subsurface rights to 7,744.06 km<sup>2</sup> of Category A Settlement Land selected by Vuntut Gwitchin First Nation Elders for ecological and heritage values within the Vuntut Gwitchin First Nation Traditional Territory, and three Special Management Areas that permanently protect the wintering habitat and migration corridors of the Porcupine caribou herd were created:

1. Vuntut National Park (4,345 km<sup>2</sup>) designated under Canada's National Parks Act;

---

<sup>24</sup> Erin Sherry and Vuntut Gwitchin First Nation. *The Land Still Speaks: Gwitchin Words About Life in Dempster Country (Jii Nanh Tth'aih Hee Giinkhii)*, 1999.

2. Ni''iinlii Njik (Fishing Branch) Territorial Park designated under Yukon's Parks Act, and managed as a single ecological unit with the adjacent Habitat Protection Area and Vuntut Gwitchin First Nation Settlement Lands (6,500 km<sup>2</sup>); and,
3. Tat K'atr'anahtii (Old Crow Flats) Special Management Area (12,116 km<sup>2</sup>) that includes portions of Vuntut National Park, Vuntut Gwitchin First Nation Settlement Land and Yukon public land.

### North Yukon Regional Land Use Plan

The *North Yukon Regional Land Use Plan*<sup>25</sup>, arising from provisions under the *Vuntut Gwitchin First Nation Final Agreement*, is "designed to protect the significant natural and cultural resources of the region while still allowing for...economic development opportunities." The Porcupine caribou herd is recognized as the, "most significant and culturally-important wildlife resource in the planning region" and the Plan addresses, "oil and gas development in a significant portion of the annual range of the Porcupine Caribou herd" as one of two key planning issues.

*The Vuntut Gwitchin are a resourceful people and will not shy away from economic opportunities. However, the teachings of our ancestors resonate with each land use issue we are engaged in, and with each decision we must make.*

*We have been taught to do things in co-operation with others.*<sup>26</sup>

Shirley Frost, Vuntut Gwitchin First Nation  
Chair, North Yukon Planning Commission

Two additional protected areas that include portions of the Porcupine caribou winter range, and migration corridors were designated through recommendations of the Plan:

1. Ch'ihilii Chik Habitat Protection Area (468 km<sup>2</sup>) under the Yukon's *Environment Act* and the *Vuntut Gwitchin First Nation Final Agreement*; and,
2. Dàadzàii Vàn Territorial Park (1,525 km<sup>2</sup>) under the Yukon's *Parks and Land Certainty Act*.

As with protected areas established through the Vuntut Gwitchin First Nation Final Agreement, protected areas established through recommendations of the North Yukon Regional Land Use Plan are withdrawn for surface and subsurface rights issuance, meaning oil and gas, mining and other industrial lands uses are not allowed.<sup>27</sup>

The Plan establishes an integrated land management framework consisting of planning tools to manage the impacts of industrial land use activities – landscape management units, a land

---

<sup>25</sup> North Yukon Planning Commission. North Yukon Regional Land Use Plan. 2009

<sup>27</sup> Ibid, Table 3.1, p.3-2.

use designation system and general management direction, including a results based management framework – a structured way to determine if planning goals are being met.<sup>28</sup>

The success of the *Vuntut Gwitchin First Nation Final Agreement* and the *North Yukon Regional Land Use Plan*, to ensure the long-term vitality of the Porcupine caribou herd through the designation of protected areas and the management of the Vuntut Gwitchin First Nation Traditional Territory and its Settlement Lands, is jeopardized with the Bureau of Land Management's apparent disregard for the cumulative and transboundary impacts of oil and gas development in the Coastal Plain.

## **Cultural Resources**

The cultural resources section fails to provide the traditional knowledge to address potential impacts on the Gwich'in people from industrial activities in "The Sacred Place Where Life Begins," that could harm this significant ethnographic cultural resource. The National Historic Preservation Act requires BLM to meaningfully pursue consultation for all Gwich'in communities along the historic migration path of the Porcupine Caribou Herd.<sup>29</sup>

The geographic scope for cultural resources, both existing environmental baseline and impact analysis, was too limited because it only included the Coastal Plain (program area) for direct/indirect impacts, and the "North Slope" (in the US) for cumulative impacts (draft EIS Vol. II. p. F-31). By definition, Bureau of Land Management excluded the Vuntut Gwitchin First Nation in the direct cultural resources analysis despite the transboundary cultural effects and our reliance on the Porcupine caribou herd.

The draft EIS assumed that "all surveyed areas of the program area could include cultural resources. Furthermore, past surveys have been cursory and likely did not adequately identify cultural resources." (draft EIS Vol II p. F-31) It is possible that additional cultural periods are represented on the Coastal Plain, and evidence could be revealed with adequate surveys.

Note: the chronology of archeology survey periods, "Cultural themes and period of the Arctic Refuge Area," (Table 3-25) fail to list the Gwich'in and their distinct language and homelands. The Alaska Heritage Resource Sites list shows most are historic or Modern, while others are "prehistoric," or "Protohistoric" without any indication of their heritage (Inupiat, Gwich'in, or others) see Table L-1). Only Inupiat Traditional Land Use Sites for the Coastal Plain itself were listed (Table L-2; source listed is for IHLC, Inupiat History, language and Cultural Division, TLUIS, 2018).

## **Underlying Assumptions for caribou impact are flawed**

The No Action Alternative does not meaningfully describe the benefits of the existing condition for the Porcupine Caribou Herd's range over a reasonably long time frame (at least 100 years) in

---

<sup>28</sup> North Yukon Planning Commission. North Yukon Regional Land Use Plan. 2009.

<sup>29</sup> 36 C.F.R. § 800.8(c)(3).

light of Indigenous Peoples' use of the migratory caribou for 12,000 – 29,000 years and the presence of caribou in the region for at least 400,000 years.

The cumulative impacts section for the Porcupine caribou herd is only two paragraphs long (p. 3-122), has no results from qualitative or quantitative analysis, and contains this error, “subsistence hunting of caribou has probably occurred in the program area for millennia” [emphasis added].

The draft EIS section on the existing environment and caribou impacts (Draft EIS pp. Vol. 1 3-103 to 3-12) fails to incorporate any traditional knowledge and also contains a biased and poor summary of western scientific research on impacts of oil and gas development on the Central Arctic Caribou herd (e.g. see comment letters from the Yukon Government, Government of Canada, and the recent Vulnerability Analysis by Russell and Gunn 2019.<sup>30</sup>

The ANILCA Sec 810 subsistence analysis contains insufficient and incorrect information about pipeline and road effects in the Prudhoe Bay and Kuparuk oil fields, fails to include information about regional shifts of calving away from oil field infrastructure as its scale and intensity increased over time, and downplays effects of oil and gas on the Central Arctic caribou with misleading information about habituation.<sup>31</sup>

#### Cultural Resources: Lack of baseline and analysis for Vuntut Gwitchin

The draft EIS notes impacts common to all alternatives, “ while potential impacts on specific cultural resource sites would differ by alternative... broader cultural impacts on belief system/religious practices common to all alternatives. Particularly for the Gwich'in people, who hold the program area as sacred ground to their culture and as *lizhik Gwats'an Gwandaii Goodlit*, “The Sacred Place Where Life Begins” (Gwich'in Steering Committee 2004), the presence of development in the program area would constitute a cultural impact on the Gwich'in people.... This sacred pattern of migration and birth maintains the value of, and gives essence to, the Coastal Plain as the place where life began. This sacred belief is based on the intergeneration traditional knowledge of the Gwich'in people that is built on millennia of residence in the region (see Irving 1958 and Kofinas et al. 2002 for examples of this knowledge). Similar to the cultural value that Inupiat place on bowhead whales in the cultrue, caribou are held in the highest regard by the Gwich'in people and are the backbone of their cultural identity (Slobodin 1981). Any potential impacts on the resource would constitute a cultural effect.

---

<sup>30</sup> Russell, D. and A. Gunn. Feb 3, 2019. Vulnerability analysis of the Porcupine Caribou Herd to potential development of the 1002 lands in the Arctic National Wildlife Refuge. Report submitted to Environment Yukon, Environment and Climate Change Canada, and NWT Environment and Natural Resources. 144 pages. <http://www.pcmb.ca/PDF/1002/Russell%20and%20Gunn%202019%20PCH%20vulnerability%201002%20Final.pdf>

<sup>31</sup> See Russell and Gunn 2019; NRC 2003 pp. 111-117; Cameron, RD, WT Smith, RG White and B. Griffith. 2002. The Central Arctic Caribou Herd pp. 38-45 in: D. C. Douglas, P. E. Reynolds, and E. B. Rhode, editors. Arctic Refuge coastal plain terrestrial wildlife research summaries. U.S. Geological Survey, Biological Resources Division, Biological Science Report USGS/BRD/BSR-2002-0001

These effects, including those on belief systems, are also discussed in Sec. 3.4.4 [Sociocultural systems]...In summary, given the information currently available and the undetermined location and nature of development in the program area, potential impacts on traditional belief systems/ religious practices and other ethnographic cultural resources, such as TCPs [Traditional Cultural Properties] and cultural landscapes, particularly for the Gwich'in people would be adverse, regional, and long term.... ] (Draft EIS Vol I pp. 3-156-157; see also p. 3-159)

Yet, the Draft EIS only addresses climate change impacts on the affected environment (i.e. current conditions) and fails to address cumulative effects of climate change and oil and gas on cultural resources, including on unknown traditional land use sites/archeological sites in the Coastal Plain and the broader region of cultural landscapes significant to the Vuntut Gwich'in relationship with the Porcupine caribou herd. (Draft EIS Vol. I 3-159).

Despite explaining the significance of the Coastal Plain as an important cultural landscape, the draft EIS (p.3-159) reaches a premature, unsubstantiated conclusion: "No potential adverse effects on documented specific cultural resources would be expected in areas where adequate investigation, such as surveys, consultation, and interviews has occurred prior to development and where appropriated avoidance, minimization, or mitigations measures are implemented...".

## **Subsistence Harvest**

*Caribou is very important to my family because it is our main source of food. It is our survival.<sup>20</sup>*

Jane Montgomery, Vuntut Gwitchin First Nation

*Caribou is an important food source; it is part of my Gwich'in identity, culture, traditions and history. Caribou, vadzaih, is what connects me to everything around me, it comes full circle.*

Mary Jane Moses, Vuntut Gwitchin First Nation

The Bureau of Land Management failed to determine impacts to Vuntut Gwitchin First Nation subsistence harvest. This is problematic because the Vuntut Gwitchin First Nation is a primary user group of the Porcupine caribou herd, caribou is a significant portion of the Vuntut Gwich'in diet, and the preferred harvest species.

The economy of many northern Indigenous communities, including Old Crow, is a complicated balance of the wage economy and subsistence lifestyle. The Bureau of Land Management failed to meaningfully analyze the complexity of subsistence resources and practices, or determine how oil and gas activity on the Coastal Plain will impact cultural and traditional values, or the socio-economic viability of remote, northern Indigenous communities.

In fact, while the Bureau of Land Management determined the analysis area for direct, indirect and cumulative impacts to subsistence use is, "all areas used by the 22 Alaska caribou study communities and seven Canadian user groups subsistence study communities" it did not consider the Vuntut Gwitchin First Nation under the ANILCA Sec. 810 (subsistence impacts). The

preliminary evaluation only addressed US communities, and did not explain why Canadian communities were not assessed.

Other deficiencies in the assessment of impacts to subsistence harvest include:

- The draft EIS does not distinguish communities reliant on the Porcupine caribou herd from those harvesting the Central Arctic herd. While communities that use each herd are listed in the ANILCA Sec. 810 Preliminary Evaluation (DEIS e-3), the specific knowledge and practices are not described.
- The sum total of data for Canadian harvesters is minimum at best.
- There is no discussion of harvests of other species including migratory birds and fish that tie Vuntut Gwich'in to the Coastal Plain.
- There is no discussion of role of Vuntut Gwich'in active management of the herd, in either a traditional or contemporary, co-management context.

#### ANILCA Subsistence 810 Requirements

The ANILCA Sec 810 is tucked into one appendix and it does not appear to fully inform the subsistence impacts section. Although the draft EIS found that 18 communities had positive customary and traditional use determinations for the PCH and/ or CAH (Map 3-27, Subsistence Study Communities), BLM determined Kaktovik, Arctic Village and Venetie are the only communities that may be appreciably affected by changes in the abundance or availability of PCH caribou, and failed to address Canadian communities at all." (Draft EIS p. E-3) Nonetheless, BLM concluded without adequate justification that the cumulative case considered in this EIS may significantly restrict subsistence uses for only Kaktovik only, not for Arctic Village or Venetie, nor any other Gwich'in communities.

#### **Sociocultural Impacts: Analysis stops at Canadian border**

The transboundary Porcupine caribou herd sustains the Vuntut Gwich'in and other Gwich'in communities located in the winter range or along migratory routes in Alaska, the Yukon and the North West Territories. The draft EIS is deficient in limiting the evaluation of sociocultural impacts to Alaskan people and communities, and it completely fails to address how oil and gas activity on the Coastal Plain will affect sociocultural values of the Vuntut Gwitchin First Nation, and other Canadian user groups. The Vuntut Gwitchin raised these important cumulative, sociocultural impacts issues during the scoping phase, but were not addressed in the draft EIS.

The brief discussion of existing social and political organization for "Gwich'in People" including in Canada (Draft EIS Vol I pp 3-182 to 3-183) does not address the Vuntut Gwitchin or other transboundary Gwich'in. This section focuses on the US social structures (DEIS 3-183 to 185) and fails to distinguish Canadian differences, for example, land and wildlife co-management responsibilities arising from the *Vuntut Gwitchin First Nation Final Agreement*. Furthermore, the draft EIS does not acknowledge the important sharing and other transboundary ties between Gwich'in communities.

## Cumulative Impacts

The draft EIS fails to address how oil and gas activities on the Coastal Plain will cumulatively impact the Vuntut Gwich'in who have already weathered incredible waves of change in only a few generations, and are facing more significant social and economic changes with youth living in two worlds, and climate change impacts to the weather, land, water and wildlife.

The draft EIS fails to describe the negative impacts the threat of oil and gas development in the Coastal Plain has on the Gwich'in in the analysis for Alternative A, No Action. The statement "Gwich'in sociocultural systems would likely continue to evolve as a result of existing forces of change..." (Draft EIS Vol. 1 p. 3-187) is vague, and fails to describe changes that could result from accelerating climate change.

The National Research Council's 2003 report, *Cumulative environmental effects of oil and gas activities on Alaska's North Slope*, found there had already been major cumulative effect across the Gwich'in Nation as a result of the debate over oil and gas development in the Refuge Coastal Plain.

*Proposals to explore and develop oil resources in the Arctic National Wildlife Refuge have resulted in perceived risks to Gwich'in culture in Alaska and the Yukon Territory that are widespread, intense, and themselves are accumulating effects. The Gwich'in have a centuries-old nutritional and cultural relationship with the Porcupine Caribou Herd and oppose new onshore petroleum development that they believe threatens the caribou.*<sup>32</sup>

The National Research Council also documented major impacts to the landscape and Indigenous Peoples that are relevant to our concerns regarding the Porcupine caribou calving grounds.

*Many activities associated with petroleum development have changed the North Slope landscape in ways that have had aesthetic, cultural, and spiritual consequences that accumulate. The consequences have increased along with the area of tundra affected by development and they will persist as long as the landscape remains altered...*

*Human-health effects, including physical, psychological, cultural, spiritual, and social, have not been adequately addressed or studied.*<sup>33</sup>

The draft EIS failed to identify data gaps or to analyze past, present and potential cumulative effects of oil and gas activity on the Porcupine caribou herd and its habitats. There is no analysis of past, present or future impacts on the herd's size, migrations, range, habitat quality, productivity or energetics.

---

<sup>32</sup> NRC 2003 p. 148.

<sup>33</sup> NRC 2003 p. 148.

## **Climate change and stressors: Lack of Climate Change impact analysis**

In its assessment of the impacts of climate change on the Porcupine caribou herd, the draft EIS primarily speaks in speculative future generalities, for example “could result in....” The draft EIS fails to synthesize the results of research and Traditional Knowledge on past and present climate change effects on the Porcupine caribou herd, their habitats and migration behaviour. The draft EIS does not include assessment of the combined and synergistic impacts of climate change and Coastal Plain oil and gas activities, infrastructure, and production in the future on the Porcupine caribou herd.

Nor does it consider the trajectory of climate change under the range of different IPCC scenarios and their impact on environmental change in the region and caribou, and consider the added risk due to the changing climate from oil and gas development over the 85 - 130 year life oil and gas activities and infrastructure in the Coastal Plain.

## **Conclusions**

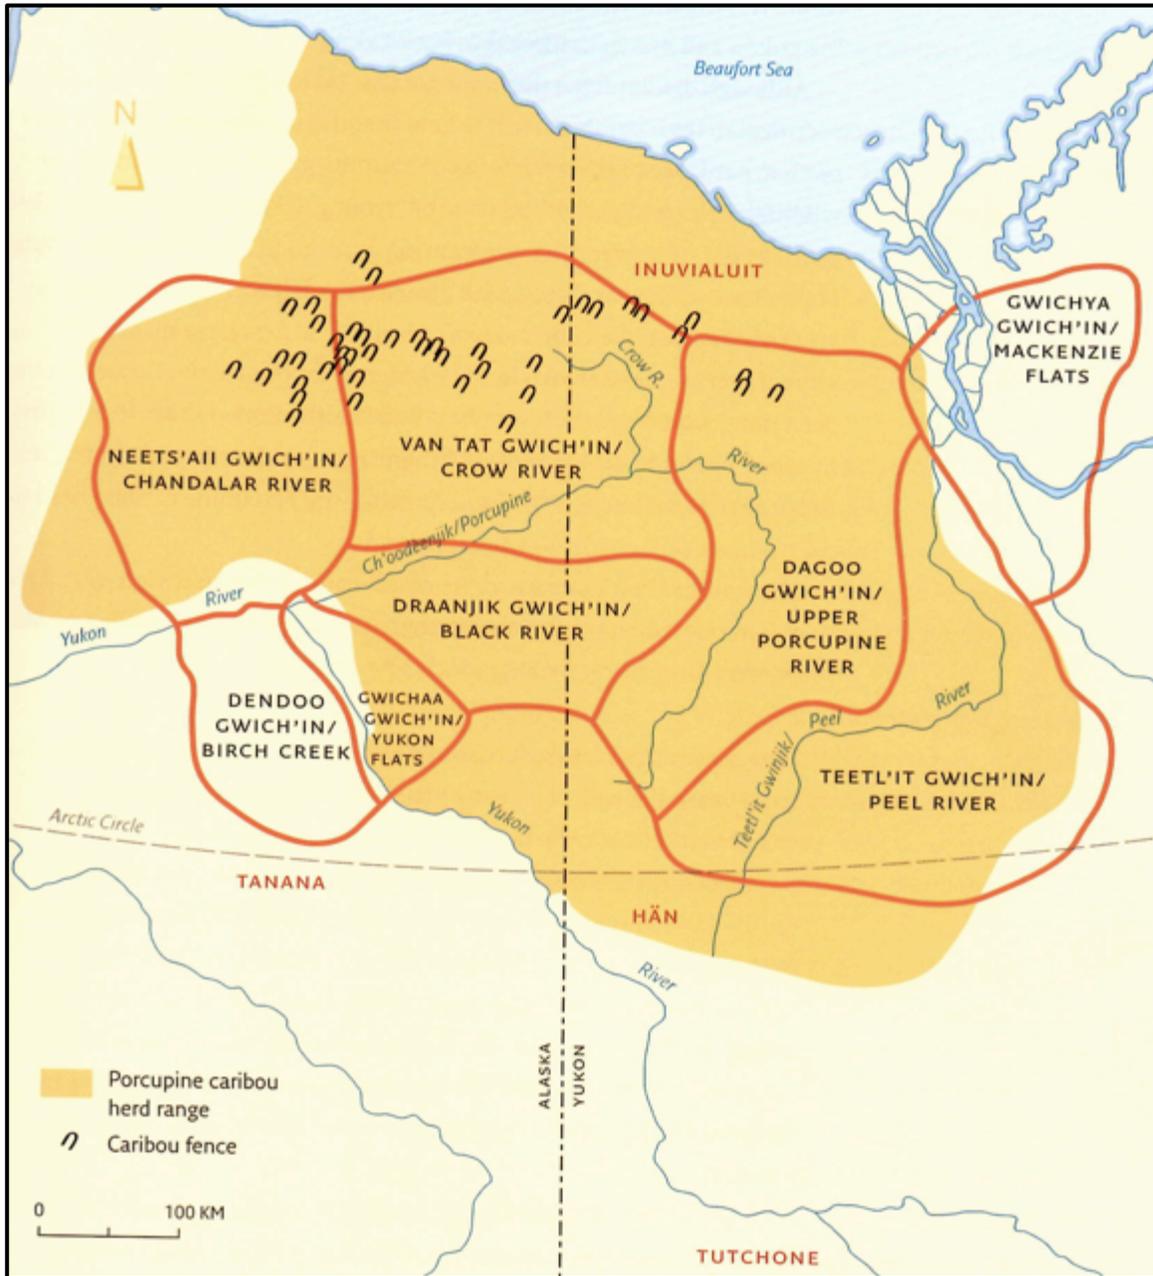

In conclusion, the Bureau of Land Management has undertaken a rushed process to determine the impacts of an oil and gas program on the Coastal Plain, and in doing so neglected to adequately consider impacts to the transboundary Porcupine caribou herd, and how these impacts could significantly affect the long-term health and viability of Vuntut Gwitchin First Nation and other Canadian Indigenous user groups.

We conclude the draft EIS is so deficient, and its approach to the impacts analysis is so deeply flawed, the Bureau of Land Management must revise and reissue the draft EIS for public review if it is to move forward with an inclusive and transparent regulatory process.

The Vuntut Gwitchin Government formally requests the Bureau of Land Management re-open the public comment period on the draft EIS, and that public meetings are held in the Vuntut Gwitchin First Nation community of Old Crow, Yukon, and other Canadian communities to discuss the Coastal Plain oil and gas leasing program draft EIS.

The Vuntut Gwitchin Government formally requests that Bureau of Land Management hold a public subsistence hearing per ANILCA Section 810 in Old Crow, Yukon, and meets consultation requirements with the Vuntut Gwitchin First Nation.

The Vuntut Gwitchin Government formally requests an extension of 60 days to comment on the draft EIS, to provide time for meetings and hearings to occur in Old Crow and Canada, and provide any additional comments the Vuntut Gwitchin First Nation may further identify as a result. And on release of a revised EIS, the Vuntut Gwitchin Government formally requests public meetings and hearings in Old Crow, Yukon and other Canadians communities.

**GWICH'IN TRIBAL COUNCIL (GTC) COMMENTS ON COASTAL  
PLAIN OIL AND GAS LEASING PROGRAM DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (LEASING EIS)**

**SUBMITTED TO**

**UNITED STATES DEPARTMENT OF THE INTERIOR  
BUREAU OF LAND MANAGEMENT (BLM)**

**MARCH 13, 2019**

## 1.0 Introduction

The Gwich'in Tribal Council (GTC) submitted comments to the Bureau of Land Management (BLM) regarding the scope of the Coastal Plain Oil and Gas Leasing Program Environmental Impact Statement on June 18, 2018. In our letter submission at that time we emphasized our fundamental concern about the threat to the Porcupine Caribou Herd posed by the prospect of the United States BLM proceeding to implement an oil and gas leasing program in the Coastal Plain area of the Arctic National Wildlife Refuge (ANWR) in Alaska. The serious, direct threat that a decision to implement the proposed oil and gas leasing program within the Coastal Plain region of the ANWR poses to the birthing and calving ground of the Porcupine Caribou Herd was THE significant issue that we identified pertaining to this proposed program.

Shortly after making our letter submission of June 18, 2018, the Gwich'in people from Canada and the United States met at the biennial *Gwich'in Gathering* held in Tsiigehtchic in the Northwest Territories in Canada. A *Resolution to Protect the Birthplace and Nursery Grounds of the Porcupine Caribou Herd* was passed at the 2018 *Gathering*. This Resolution reiterated a position that the Gwich'in people have held since the 1988 *Gwich'in Gathering* (which then was the first such *Gathering* that had been held in over 100 years), when the Gwich'in Elders gave direction to the Gwich'in people to seek permanent protection of the Porcupine Caribou calving grounds within the ANWR. The 2018 *Gwich'in Gathering* resolved:

That the United States President and Congress recognize the rights of the Gwich'in people to continue to live our way of life by prohibiting exploration and development in the calving and post-calving grounds of the Porcupine Caribou Herd.<sup>1</sup>

The Gwich'in support sustainable development generally but continue to oppose development within the ANWR because of the important role of the Porcupine Caribou Herd birthing and calving grounds within the ANWR 1002 lands for the conservation of the Herd. Accordingly, the GTC and the Gwich'in people call for the U.S. BLM to adopt the "Alternative A – No Action" alternative identified in Chapter 2 Alternatives of the draft Coastal Plain Oil and Gas Leasing Program Draft Environmental Impact Statement (Draft Leasing EIS). This Alternative would result in no federal minerals in the Coastal Plain being offered for future oil and gas lease sales after the BLM's Record of Decision (ROD) for the Leasing EIS is signed. We acknowledge that the Draft Leasing EIS has stated that, "Alternative A will not comply with the directive under PL 115-97 to establish and administer a competitive oil and gas program for leasing, developing, producing, and transporting oil and gas in and from the Coastal Plain." In

<sup>1</sup>Gwich'in Niintsyaa 2018: *Resolution to Protect the Birthplace and Nursery Grounds of the Porcupine Caribou Herd*, passed unanimously on the 26<sup>th</sup> day of June, 2018 in Tsiigehtchic, Northwest Territories, Canada.

view of this, the draft Leasing EIS has effectively rejected Alternative A that it presents and uses, “...to provide a baseline for comparing impacts under the action alternatives.”<sup>2</sup>

In the covering letter released with the Draft Leasing EIS the BLM’s acting state Director indicated that the BLM welcomed comments on the document that specifically addressed several matters. These include:

- Identification of new information that would have a bearing on the analysis; and
- Identification of new impacts, alternatives, or potential mitigation measures.

The GTC will present such new information in this submission that we present in support of the call made by the Government of Canada for the BLM to establish a supplementary Leasing EIS to ensure that all relevant information is considered before a BLM decision is made to finalize the Leasing EIS. This information relates to recorded Gwich’in Traditional Knowledge about the Porcupine Caribou and the need for further research to be done to address gaps that exist in such recorded knowledge, prior to a BLM ROD on the proposed ANWR Coastal Plain oil and gas leasing EIS. The draft Leasing EIS is devoid of consideration of such traditional knowledge which is and must be an essential source of information to consider for a complete Leasing EIS. Placing equal weight on such traditional knowledge in relation to available scientific knowledge in assessing the environmental impacts of the proposed oil and gas leasing program for the ANWR Coastal Plain area is one of the important areas identified by the GTC in its Draft Leasing EIS scoping process letter submission as needing to be considered. Upon such consideration, together with other factors, it will become apparent why it is necessary for the BLM to decide to initiate a supplementary EIS. It is necessary in order to ensure that an up to date and comprehensive body of recorded Gwich’in traditional knowledge about the Porcupine Caribou is available for consideration by the BLM in reaching a ROD on the content of its Coastal Plain Leasing EIS.

In support of this call, this GTC submission is structured as follows. It begins following this Introduction with an overview of the special relationship between the Gwich’in people and the Porcupine Caribou and the Herd’s importance to the Gwich’in people’s culture, health, subsistence and traditions, and an identification of the major gaps and deficiencies of the Draft Leasing EIS. This will be followed by reference to the *1987 Agreement Between the Government of Canada and the Government of the United States of America on the Conservation of the Porcupine Caribou Herd* (the 1987 Agreement), as a basis for action by the U.S. BLM to fully address and consider the Gwich’in Porcupine Caribou traditional knowledge information identified by the GTC before reaching a ROD on the Leasing EIS for the proposed Coastal Plain

oil and gas leasing program. The content of a Phase 1 Gwich'in Knowledge of Porcupine Caribou Study that will accompany this submission will then be summarized, followed by a Conclusion and Recommendations section.

## **2.0 Overview of the Gwich'in-Porcupine Caribou Special Relationship and Draft Leasing EIS Comments**

The traditional territory of the Gwich'in people extends across northeastern Alaska in the United States and through the northern areas of the Yukon Territory and of the northwest part of the Northwest Territories in Canada. A unique, complex and special multi-dimensional relationship exists between the Gwich'in people and the Porcupine Caribou, that is reflected in the fact that the traditional territory of the Gwich'in people largely mirrors the migration range of the Porcupine Caribou. Every summer the Porcupine Caribou birth and calve in the Alaskan and Yukon Territory Coastal Plain area. During the winter months they migrate south into the northern mountainous areas of the Yukon Territory and the Mackenzie River area and Peel River basin. Moreover, the draft Leasing EIS notes that based on the most recent data cited that “Canadian users accounted for 85 percent of the harvest and Alaska users were 15 percent of the harvest.”<sup>3</sup> Therefore, the most relevant and essential body of traditional knowledge about the Porcupine Caribou that must be considered in assessing the potential environmental impact of the proposed Coastal Plain oil and gas leasing program is Gwich'in traditional knowledge held by the Gwich'in Canadian harvesters of Porcupine Caribou.

Due to the special relationship between the Gwich'in people and the Porcupine Caribou, the Gwich'in people have a deep and thorough knowledge about the species. This “traditional knowledge” is based on experience and teachings that are passed down from one generation of Gwich'in to another from traditional knowledge holders. The term “traditional” has a special meaning in this context in that it refers to the Gwich'in way of doing things. That is, traditional Gwich'in hunting practices are based on Gwich'in rules and on Gwich'in culture. The term traditional in this sense is rooted in history and experience, but it does not mean that traditional is historical or out of date. On the contrary, “Traditional knowledge is the modern body of information that is held by Gwich'in knowledge holders, based on experiences and teachings dating back millennia.”<sup>4</sup>

The GTC Leasing EIA scoping process letter submission of June 18, 2018 identified Traditional Knowledge (TK) as an essential information source for assessing the potential and likely impact of the proposed oil and gas leasing program. It also stressed that, “it is essential that the EIS

---

<sup>3</sup> U.S. Department of the Interior Bureau of Land Management, *Coastal Plain Oil and Gas Leasing Program Draft Environmental Impact Statement*. Volume 1, 3-168.

<sup>4</sup>See “Executive Summary” in K. Benson, *Gwich'in Knowledge of Porcupine Caribou: State of current knowledge and gaps assessment*, Gwich'in Tribal Council Department of Cultural Heritage, March 2019, ii.

place as much analytical weight and emphasis on recorded, traditional knowledge (TK) about the Porcupine caribou Herd, as is placed on ‘scientific knowledge.’ ” The draft Leasing EIS released in December 2018 does not reflect consideration of recorded traditional knowledge, let alone consideration of recorded traditional knowledge of the Gwich’in harvesters who account for 85 percent of the harvesters of Porcupine Caribou. This is a clear and glaring deficiency in the draft Leasing EIS. It must be rectified before the BLM could be in a position to reach a ROD on the Leasing EIS for the proposed oil and gas leasing program for the Alaskan Coastal Plain region of the ANWR. As indicated in Section 4.0 of this submission, the current state of recorded Gwich’in traditional knowledge of the Porcupine Caribou is incomplete. This fact underlies the GTC’s support for initiating a supplemental EIS for the proposed oil and gas leasing program.

The absence of consideration of Gwich’in TK in the draft Leasing EIS also highlights the broader issue deficiency of the document in not addressing transboundary implications of the proposed oil and gas leasing program. The vertical borders on the map imposed by newcomers bear no resemblance to either traditional Gwich’in traditional territory, or to the territory over which the Porcupine Caribou range during their annual and seasonal migration to and from their birthing and calving areas in the Alaskan Coastal Plain. Porcupine Caribou do not recognize international borders. Nor will the potential effects of implementing the proposed oil and gas leasing program be confined within or constrained by the Canada-U.S. international border. Therefore, transboundary effects must be considered to provide a complete and accurate environmental impact assessment of the proposed project. The draft Leasing EIS released in December 2018 does not do this. Doing so is also arguably a requirement pursuant to the 1987 international agreement between Canada and the United States.

### **3.0 Treaties, International Agreements and Transboundary Effects**

Chapter 1 of the draft Leasing EIS deals in a very cursory way in section 1.9 with International Agreements. Reference is made very briefly to the 1987 *Agreement Between the Government of Canada and the Government of the United States of America on the Conservation of the Porcupine Caribou Herd*. It is noted that the purpose of the 1987 Agreement was to conserve the herd and its habitat through international cooperation and coordination. The terms of the 1987 Agreement provide a further basis for the BLM to commit to embarking on a supplemental EIS relating to the proposed oil and gas leasing in the ANWR Coastal Plain region. The draft Leasing EIS does not address the implications of the terms of this Agreement as it could and should apply to the approach taken by the BLM to compiling the oil and gas Leasing EIS.

The Gwich’in call upon the United States Government through the BLM to abide by the terms of the 1987 Agreement. It begins in the Preamble to the Agreement with a statement that the parties to it recognize that, “...caribou in their large free-roaming herds comprise a unique and irreplaceable natural resource of great value which each generation should maintain and make

use of so as to conserve them for future generations.” Among the Conservation components of the Agreement are statements that “the Parties will take appropriate action to conserve the Porcupine Caribou Herd and its habitat” and will “ensure that the Porcupine Caribou Herd, its Habitat and the interests of users of Porcupine Caribou are given consideration in evaluating proposed activities within the range of the Herd.” Clearly, the oil and gas leasing program in the ANWR Coastal Plain region qualifies as a “proposed activity” within the range of the Herd that the 1987 Agreement requires that the Parties give effective consideration in assessing these activities to their potential effect on “the Porcupine Caribou Herd, its habitat and the interests of users of Porcupine Caribou.” Merely noting the existence of the 1987 Agreement in the draft Leasing EIS is a wholly inadequate and incomplete approach to addressing the obligations of the United States under the 1987 Agreement.

Moreover, consideration of the transboundary effects of the proposed oil and gas leasing in the ANWR should also extend to an analysis of the potential effects on the Aboriginal and treaty rights of the Gwich'in harvesters of Porcupine Caribou who account for 85 percent of the harvesting of this resource. Under s. 35 (1) of the *Constitution Act, 1982*, Aboriginal and treaty rights are recognized and affirmed. The Gwich'in Comprehensive Land Claim Agreement (GCLCA) signed in 1982 between the Gwich'in and the Government of Canada and the Government of the Northwest Territories established mechanisms through which the Gwich'in people manage and control land and resources within the Gwich'in Settlement Area (GSA). This modern treaty provides for Gwich'in harvesting rights both within the GSA and in the Gwich'in Primary Use Area and Secondary Use Area within the Yukon Territory, under the terms of the Yukon Transboundary Agreement (YTA), which is Appendix C to the GCLCA.

These harvesting rights of the Gwich'in under the GCLCA are treaty rights protected by s. 35 of the *Constitution Act, 1982*. While the scope of these rights under this Act apply within the borders of Canada, a complete assessment of the transboundary effects of the proposed Alaskan Coastal Plain oil and gas leasing program would need to encompass analysis and identification of the potential effects of the program on the continued availability of the Porcupine Caribou Herd for the Gwich'in harvesters on the Canadian side of the border. Porcupine Caribou harvesting rights could be rendered ineffective if the effect of the proposed oil and gas leasing program in the ANWR were to result in changes in the health and size of the Herd and in its migration patterns that could result in there no longer being Porcupine Caribou available for the Gwich'in harvesters to harvest.

Not only the Gwich'in on the Canadian side of the border have and continue to be concerned about the health and well being of the Herd. Before the signing of the GCLCA in 1992, the Gwich'in, through their role at that time as a member of the Dene Nation and Metis Association of the Northwest Territories, joined with the Government of Canada, the Governments of the Yukon and of the Northwest Territories and with the Inuvialuit Game Council and with the then

Council of Yukon Indians (CYI), to conclude the Porcupine Caribou Management Agreement (PCMA). The purpose of the PCMA was for the parties to work together for "...the continued well being of the Porcupine Caribou Herd and the maintenance of its habitat." The parties to the PCMA have worked together to achieve these objectives through the mechanism of the PCMA and the Porcupine Management Board that was established pursuant to it. All of the parties to the PCMA have combined to respond to the proposed oil and gas leasing program in the ANWR by working together to defend the Herd and to take steps in response to the proposal to achieve effective conservation and management of the Porcupine Caribou population throughout its range. The BLM Leasing EIS consideration of the potential transboundary effects of the proposed oil and gas leasing program will need to consider the likely effects of the project on the Porcupine Caribou Herd and the resulting interests of all of the parties to the PCMA.

Finally, the Gwich'in and other modern treaty holders in Canada's North are working with the Government of Canada to rebuild their Indigenous Nations and the nation to nation relationships between themselves and the Crown and Canada, based on the treaty relationships established with the Crown and the Government of Canada. Protecting and preserving their traditional subsistence harvesting rights was the original impetus for the signing of Treaty 11 in 1921. Author Rene Fumoleau who has written about the history of Treaty 11 has stated that at the time that Treaty 11 was concluded, "All the witnesses stress the fact that it was only after complete freedom to hunt, to trap and to fish had been promised to the Indians, that they accepted the treaty."<sup>5</sup>

Protecting and preserving Gwich'in traditional harvesting rights as guaranteed through Treaty 11 and through the subsequent modern treaty, the GCLCA, remains a priority for the Gwich'in people today. Oil and gas leasing and development in the ANWR Coastal Plain region of Alaska could seriously harm and endanger the ability of the Gwich'in, who account for 85 percent of the harvest of Porcupine Caribou, to effectively exercise their treaty harvesting rights. This in turn would undermine both the Gwich'in goal of rebuilding the Gwich'in nation based on Gwich'in traditions and traditional practices and the goal of building an enduring nation to nation relationship with Canada based on the foundation of our established treaty relationships. These are profoundly significant potential ultimate transboundary effects of proposed oil and gas leasing and subsequent development in the ANWR Alaskan Coastal Plains region. They must be researched and examined and addressed in the context of the BLM Leasing EIS.

#### **4.0 Gwich'in Porcupine Caribou Traditional Knowledge**

Gwich'in traditional knowledge of Porcupine Caribou is noted above and was referenced by the GTC in its June 18, 2018 letter submission to the BLM as an essential ingredient in the analysis

---

<sup>5</sup>Rene Fumoleau, *as long as this land shall last: A History of Treaty 8 and Treaty 11, 1870-1939* (Calgary: University of Calgary Press, 2004), 219.

of the potential effects of the proposed oil and gas leasing program on the Porcupine Caribou Herd and its Gwich'in and other harvesters. As a first step in addressing this, the GTC initiated through its Cultural Heritage Department a Phase 1 study of Gwich'in recorded traditional knowledge of Porcupine Caribou. This study is entitled *Gwich'in Knowledge of Porcupine caribou*<sup>6</sup> and accompanies this submission to the BLM. It will be posted on the draft Leasing EIS website comments section along with this GTC submission. The Phase 1 study consists of a literature search analysis of the existing state of recorded Gwich'in traditional knowledge regarding Porcupine Caribou. As noted above, this traditional knowledge stems from the special and enduring relationship that the Gwich'in have with Porcupine Caribou resulting from the fact that Gwich'in have been hunting Porcupine Caribou for thousands of years.

Unlike “scientific data” that resides in journals, the Gwich'in traditional knowledge resides in the minds and memories of Gwich'in harvesters and has been passed down intergenerationally through stories, experiences and teachings. The challenge in accessing this Gwich'in TK about the Porcupine Caribou is to record this knowledge and the first step in doing so is to determine what the current state of recorded Gwich'in knowledge of Porcupine Caribou is. That is what is accomplished in the Phase 1 study that the GTC initiated and is providing to the BLM as part of its comments on the draft Leasing EIS.

In this GTC submission document, some of the highlights from the Phase 1 study will be identified and summarized and linked to the recommendations that the GTC is presenting to the BLM, regarding how to ensure that Gwich'in knowledge of the Porcupine Caribou is fully considered and integrated into the Leasing EIS analysis. The study content addresses three main areas:

- 1) Gwich'in and the Porcupine Caribou Herd: Culture, Practice and Continuities;
- 2) Porcupine Caribou: Health, Behaviour and Interactions; and
- 3) Identification of threats to the Porcupine Caribou, of gaps in the existing body of recorded Gwich'in knowledge of the Porcupine Caribou, and a discussion of the research methodology employed in conducting the study.

Given the gaps existing in the body of recorded Gwich'in knowledge of the Porcupine Caribou identified in the Phase 1 study, a follow-up Phase 2 Porcupine Caribou Primary Research Study is also needed to fill in these knowledge gaps. Once this study is completed – which could take up to one year, a comprehensive and up-to-date record of Gwich'in traditional knowledge of the Porcupine Caribou will be available for ensuring full incorporation into the analysis of the potential environmental effects of proceeding with the proposed oil and gas leasing program. Ensuring the availability of this knowledge for analysis will be essential for assessing the

---

<sup>6</sup> K. Benson, *Gwich'in Knowledge of Porcupine caribou: State of current knowledge and gaps assessment*, March 2019.

transboundary effects of the proposed oil and gas leasing program on the Porcupine Caribou and on the Gwich'in harvesters in Canada that comprise 85 percent of the total population of Porcupine Caribou harvesters.

Some of the notable key findings from the Phase 1 study include the following. First, Porcupine Caribou meat has and continues to be an important component of a healthy diet for the Gwich'in people. The study notes that, "...caribou meat is so deeply connected to the idea of being Gwich'in that it is considered almost irreplaceable in a healthy lifestyle."<sup>7</sup> Moreover, the study also notes the evident healing properties of Porcupine Caribou meat for the Gwich'in people, stating: "In modern times, various health departments urge Gwich'in families to consume a traditional diet including caribou, as it is a healthy addition to a modern diet. This messaging is an attempt to reduce the consumption of some of the less healthy foods which have been brought in and adopted by Gwich'in after they settled into modern towns and the wage economy, leaving the traditional life spent on the land."<sup>8</sup>

The study also provides important evidence of how the Gwich'in traditional harvesting of Porcupine Caribou is intimately linked with and determining of core elements of Gwich'in culture. This underscores and illuminates the special, enduring and complex relationship that has existed between the Gwich'in and the Porcupine Caribou since time immemorial. The study notes how "taking care of the caribou is a part of Gwich'in culture."<sup>9</sup> Gwich'in take care of the Porcupine Caribou in many ways, by sharing their harvest with others, by using as much of the carcass as they can and avoiding waste, and by preserving meat and fat for the future. The Gwich'in traditional management practices feature prominently respect for the Caribou and for the natural environment, cooperation among hunters, leadership by wise and knowledgeable hunters that apply and ensure maintenance of traditional Gwich'in harvesting practices during the hunt, and teamwork in the implementation of these traditional practices during the hunt.

The centrality of respect in Gwich'in traditional harvesting practices and in Gwich'in culture is well summarized in the study by the following statement:

Respectful behaviour towards caribou is the core of traditional human-caribou interactions and the basis for a long and sustainable relationship...Respect for the caribou encompasses all the traditional rules of hunting as described above, including sharing, wasting, not chasing, and so on. For younger Gwich'in, respectful hunting also includes participating in the wildlife co-management process and following the regulations set up within that structure.<sup>10</sup>

---

<sup>7</sup>K. Benson, *Gwich'in Knowledge of Porcupine caribou: State of current knowledge and gaps assessment*, March 2019, 3.

<sup>8</sup>Ibid., 40.

<sup>9</sup>Ibid., 13.

<sup>10</sup>Ibid., 70.

The Phase 1 study also emphasized the difficulties and uncertainties associated with determining if the Porcupine Caribou Herd is changing in size over time. This is significant as the BLM draft Leasing EIS references historical, non-traditional Herd counts in its discussion of the size of the Herd. To fully capture the importance of Gwich'in knowledge as a basis for assessing and determining changes in the size and distribution of the Porcupine Caribou Herd, the observations presented in the study are quoted here at length. These observations suggest that reliance on reports from wildlife biologists are not necessarily valid or reliable indicators:

When talking about changes in the Porcupine caribou herd, both the number of caribou – population – and the location where the caribou can be found – distribution – are considered together, as the Gwich'in are circumspect in making too many generalizations about topics that are not suited to traditional knowledge. Since caribou move so much, if they are not found by hunters in an area where they were found before, or in herds of the size anticipated based on previous years, Gwich'in harvesters can't be sure if the caribou have simply moved further away, or the population has changed.

Unfortunately, determining if the caribou herd is changing in size is very difficult. The majority of Gwich'in hunters do not have faith in the population numbers which wildlife biologists report from airline counts and collaring experiments.<sup>11</sup>

In support of these observations the study notes significant variations and oscillations in the relative degree of scarcity and prevalence of Porcupine Caribou in specific locations over time. Reference is made to such variations as evident going back and forth between the two extremes of prevalence and scarcity starting from the 1920s right up to the 2010s.<sup>12</sup>

Some information particularly relevant to assessment of the potential effects on Porcupine Caribou of potential oil and gas leasing and associated development is presented in the report as evident potential threats to the Porcupine Caribou and to the Gwich'in-Caribou relationship. Drawing on historical evidence presented to the Mackenzie Valley Pipeline Community Hearings in the 1970s, the Phase 1 study emphasizes that "Pipeline development could alter the caribou's migration, making the harvest of caribou much more difficult for Gwich'in."<sup>13</sup> Specific evidence is presented as to lasting effects on caribou migration years after drilling operations ceased. There is also significant potential noted for major influences on Porcupine Caribou migration and movement patterns resulting from potential pipeline ruptures or oil spills and even from the presence of linear infrastructure such as pipelines. These findings underscore the necessity for careful consideration of Gwich'in Porcupine Caribou knowledge in assessing the potential environmental effects of the proposed ANWR Coastal Plain region oil and gas leasing program.

---

<sup>11</sup>Ibid., 79.

<sup>12</sup>Ibid., 79-85.

<sup>13</sup>Ibid., 110.

Finally, as noted above, the Phase 1 study has identified significant and important gaps in the existing body of recorded Gwich'in Knowledge of Porcupine Caribou. These main gap areas are identified in Table 1. The gaps must be filled through a follow-up Porcupine Caribou Traditional Knowledge Primary Research Study, to ensure that a comprehensive and up to date body of recorded Gwich'in traditional knowledge of the Porcupine Caribou is available for consideration in the process of determining the potential environmental effects of the proposed oil and gas leasing program in the Porcupine Caribou birthing and calving areas of the ANWR Coastal Plain region.

## 5.0 Conclusion and Recommendations

The Gwich'in Tribal Council (GTC) submitted comments to the Bureau of Land Management (BLM) regarding the scope of the Coastal Plain Oil and Gas Leasing Program Environmental Impact Statement on June 18, 2018. In our letter submission at that time we emphasized that our fundamental concern was about the threat to the Porcupine Caribou Herd posed by the prospect of the United States BLM proceeding to implement an oil and gas leasing program in the Coastal Plain area of the Arctic National Wildlife Refuge (ANWR) in Alaska. The serious, direct threat that a decision to implement the proposed oil and gas leasing program within the Coastal Plain region of the ANWR poses to the birthing and calving ground of the Porcupine Caribou Herd was THE significant issue that we identified pertaining to this proposed program. It remains so for the Gwich'in people and the BLM draft Leasing EIS reveals insufficient consideration of this factor.

The position of the Gwich'in people was clearly expressed in the resolution passed on June 26, 2018, at the *Gwich'in Gathering* in Tsiigehtchic in the Northwest Territories of Canada:

That the United States President and Congress recognize the rights of the Gwich'in people to continue to live our way of life by prohibiting exploration and development in the calving and post-calving grounds of the Porcupine Caribou Herd.<sup>15</sup>

The Gwich'in favour “Alternative A” that is contained in the BLM draft Leasing EIA, despite the fact that the draft Leasing EIA is presented in the document as not feasible and is used merely as a baseline for assessing the potential effects of the other identified “action alternatives.” We contend that the analysis presented in the draft Leasing EIS is incomplete and inadequate. It does not at present and must include careful consideration of Gwich'in Traditional Knowledge of Porcupine Caribou, which this submission document has underscored the relevance, significance and essential nature of, for reaching an accurate appreciation of the potential environmental effects of proceeding to implement the proposed oil and gas leasing program in the ANWR Coastal Plain region. The draft Leasing EIS must also consider the transboundary effects of proceeding with the proposed leasing program and carefully consider and articulate the obligations of the United States Government, pursuant to the 1987 *Agreement Between the Government of Canada and the Government of the United States of America on the Conservation of the Porcupine Caribou Herd*.

In order to address these recommendations, the Gwich'in recommend that the BLM establish a supplementary Leasing EIA process and extend the time frame for completing that supplementary process for sufficient time to allow for the completion of a Phase 2 Gwich'in

---

<sup>15</sup>Gwich'in Niintsyaa 2018: *Resolution to Protect the Birthplace and Nursery Grounds of the Porcupine Caribou Herd*, passed unanimously on the 26<sup>th</sup> day of June, 2018 in Tsiigehtchic, Northwest Territories, Canada.

Porcupine Caribou Traditional Knowledge Primary Research Study. Upon completion of this study, we propose that the BLM and the Gwich'in collaborate in assessing and interpreting the potential effects of the proposed oil and gas leasing program that arise from consideration of the up to date and complete body of Gwich'in Knowledge of Porcupine Caribou. Failure to consider Gwich'in traditional knowledge of the Porcupine Caribou, in balance with and parallel with consideration of other data sources, would render the BLM's Leasing EIS incomplete. It also likely would be invalid as an analysis of the potential environmental effects of proceeding with the proposed oil and gas leasing program for the ANWR Coastal Plain region – the birthing and calving grounds of the Porcupine Caribou Herd, 85 percent of the harvesters of which are Gwich'in harvesters on the Canadian side of the Canada-U.S. border.
